

MOTO GUZZI Norge oil pressure gage adapter fitting

This will work with any MG with oil cooler with M16 DIN ports .

This adapter is machined from 6061 Al alloy. Its male DIN end is torqued into the oil cooler female port (using a seal ring) and the existing cooler hose union previously removed is screwed and torqued into the adapter female DIN end using a seal washer. Adapter has a female 1/8 NPT radial tapped port that allows insertion of brass elbow for pressure pick off. Recommend that the gage is plumbed using 1/8 copper tube. See my own Norge for installation (pictures below). Orientation of pick off port can be optimized by me sending you blank fitting, torquing in place and marking for subsequent machining or I provide with two opposite ports one which gets plugged and which would always give a convenient radial location that could be used.

Price \$35 + shipping

Comes with 1/8 compression brass elbow and plug as needed

Full refund if not completely satisfied
